

APPLICATIONS

Examples of ACS installations

ACS has been installed in many different venues, large and small, to improve the acoustics for performers and audience and to make the acoustics variable. It is used for good music acoustics also in smaller halls, to add early energy for clear detailed music in larger halls, to make halls suited for multiple applications or to create a true concert hall at a place you would not expect. Below are a few examples

Opera Theatre: Eliminate dry natural acoustics and make it appropriate for Opera.

Royal Opera House, Linbury Theatre, London UK

Church: Select acoustics for amplified speech, congregational singing, choir and bands, during a service.

Church of the resurrection, Leawood, KS USA

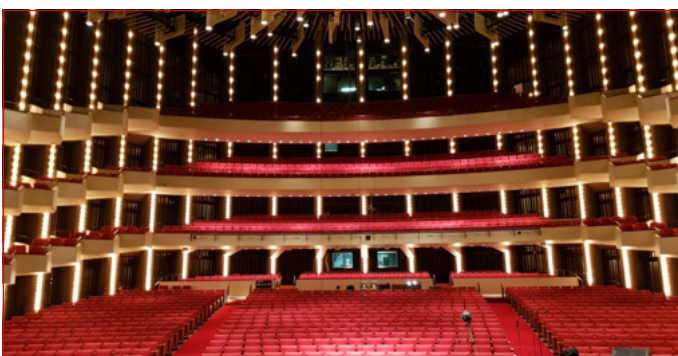

Cruise ship: Create a concert hall at sea.

Klanghaus Mein Schiff 3, TUI Cruises, Germany

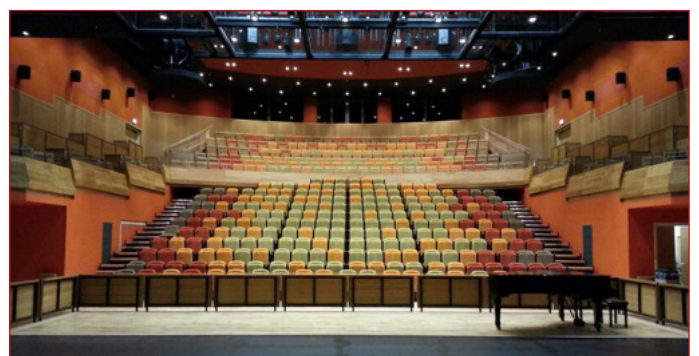

University Auditorium: From voice-lift to choir all in this relatively small room.

St John's College, Auditorium, Oxford, UK

Concert hall/Opera: Optimize acoustics for opera or symphony orchestra.

National Arts Centre, Ottawa, On Canada

Multifunctional hall: Suitable acoustics for a broad range of applications.

Y Ffwrnes, Llanelli UK
